REFURBISHMENT/WATERPROOFING: SikaCeram®, Sika® Fugafleks, SikaTop® Seal

BUILDING TRUST

RIXOS PREMIUM HOTELS BELEK & TEKIROVA IN ANTALYA, TURKEY

PROJECT DESCRIPTION

Antalya Rixos Tekirova&Belek Premium Hotels are designed to fulfill the expectation of luxury and elegance of residents, due to high quality in both design and material selection. Rixos Premium Tekirova is established on 183,000 m² and Belek on 405,000 m² total with thousands of visitor capacity. Both complexes are functional and win fame by high guest satisfaction and exquisite interior and exterior design.

PROJECT REQUIREMENTS

Interior design of the wet areas is solved by various colored tiles and marbles with high dimensions such as 60 x 60 cm and 60 x 120 cm. According to weight and dimensions of the tiles an adhesive with a high tensile capacity is needed. In addition to that maintenance applications are expensive and time consuming for fully operational hotel complexes such as Rixos. For that reason SikaCeram[®] products were chosen for known quality and high performance.

As part of this system, the waterproofing below the tiling works for the wet areas and terraces was performed with the proven cementitious waterproofing mortars of SikaTop Seal[®] range.
